List of Figures

1 Observed vs predicted r_e for six composite-roughness expressions, coloured by sigma. Lotter tracks the 1:1 line best (R^2=0.98); Pavlovskii is weakest (R^2=0.85). 2

2 Predicted vs observed n_e/¡n¿ for four CF methods, coloured by sigma. Felkel performs best (R^2=0.68); 2nd-order T_0 (CF) is weakest (R^2=0.15). 3

3 CF diagnostic coloured by tr: relative U and h errors vs CF values, plus h/U identity comparison. 3

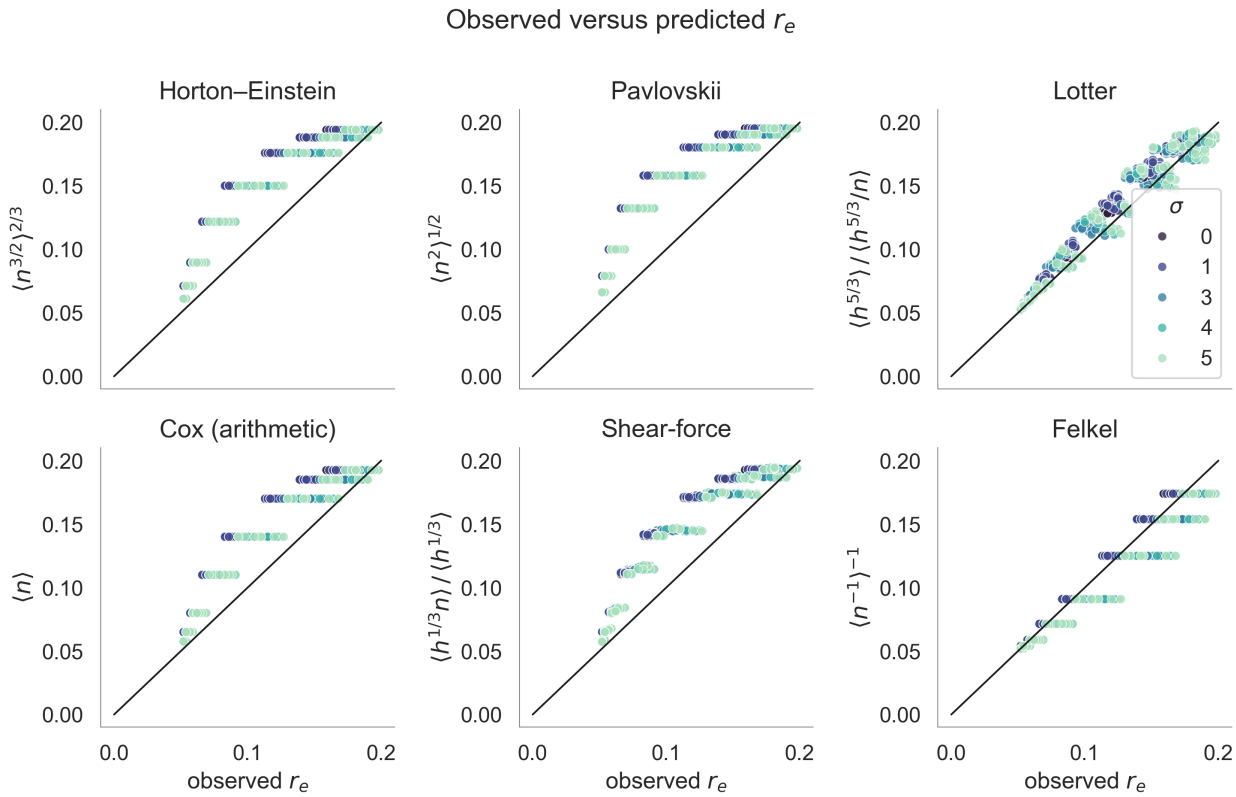

Figure 1: Observed vs predicted r_e for six composite-roughness expressions, coloured by sigma. Lotter tracks the 1:1 line best (R^2=0.98); Pavlovskii is weakest (R^2=0.85).

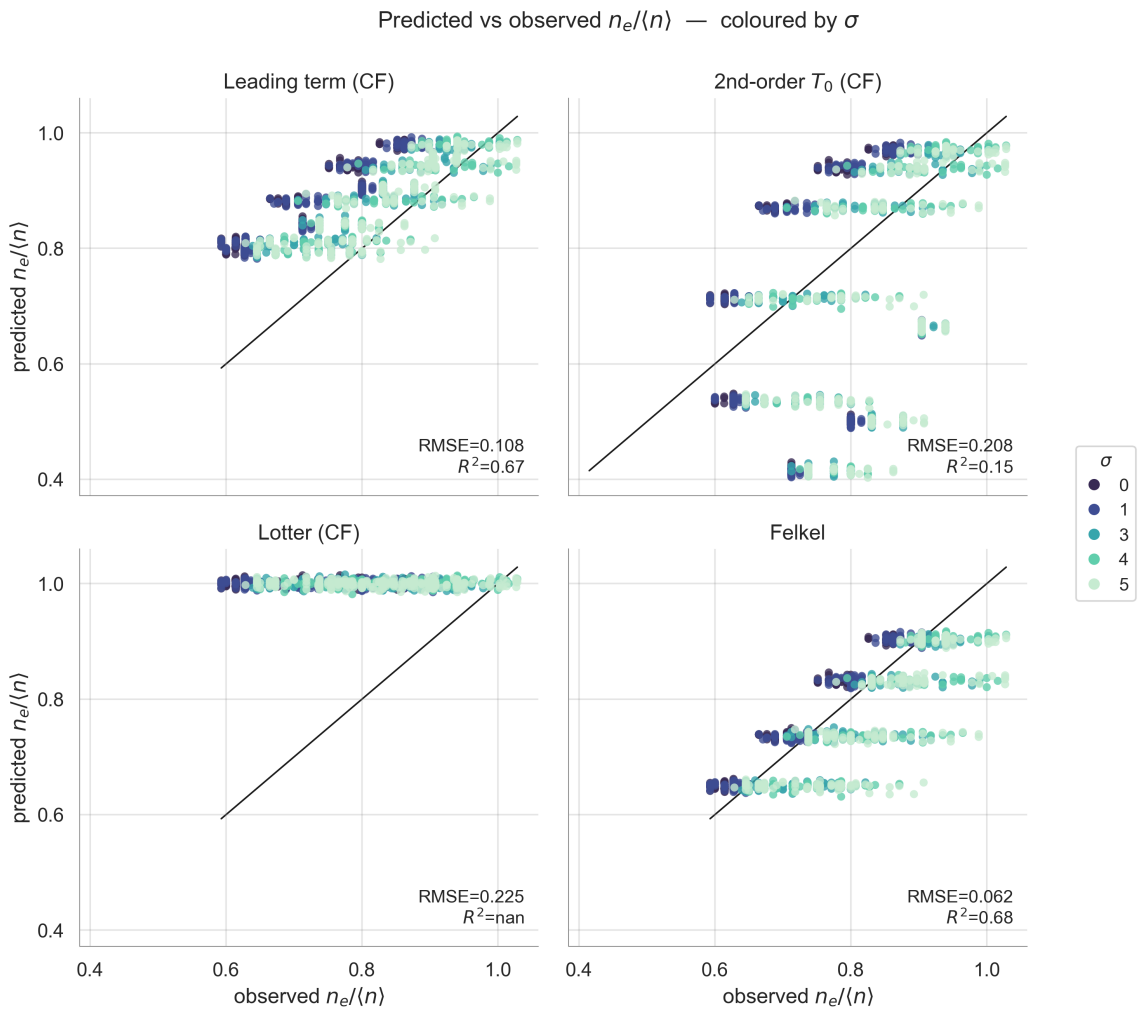

Figure 2: Predicted vs observed n_e/¡n¿ for four CF methods, coloured by sigma. Felkel performs best (R^2=0.68); 2nd-order T_0 (CF) is weakest (R^2=0.15).

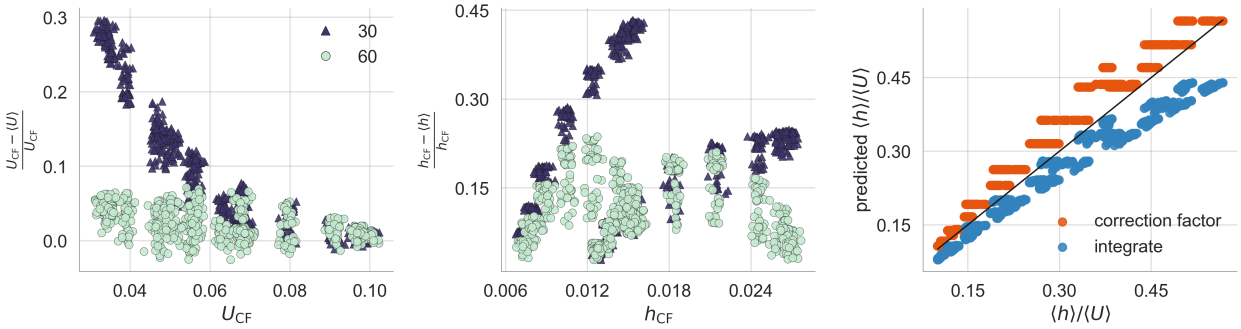

Figure 3: CF diagnostic coloured by tr: relative U and h errors vs CF values, plus h/U identity comparison.
